

**Handout**

**Reinforcement**

**4 – 7**  
Section 27

**Probability – Tree Diagrams**

1. **Observe** the contents of the bag of marbles. **Determine** the probability of the outcomes described below and **write** the corresponding letters (a to e) on the probability line.

- a) The probability of picking a grey marble from the bag rather than a white marble
- b) The probability of picking a black marble rather than a grey marble
- c) The probability of picking a white marble rather than a black marble
- d) The probability of picking a grey, black or white marble
- e) The probability of picking a red marble

2. **Observe** the butterfly net. **Describe** the probability of randomly picking a bee from the net rather than another type of insect.

It is  that someone would pick a bee from the net than another type of insect.

**3. Observe** the contents of the bag of buttons.

- a) **Draw** the tree diagram of all the possible outcomes of randomly picking 2 buttons out of the bag.

Use these abbreviations: **G** for grey, **S** for striped, **B** for black, **D** for dotted and **W** for white.

- b) How many possible outcomes are there?

There are  possible outcomes.
